

# How It Is

- It takes 5 to 15 minutes to search for one patient record.
- Half of patient records kept on papers are misplaced or are lost to natural decay, disasters.
- About a third of a clinician's time is spent on patient information recording and reporting.
- Unreliability and lack of access to quality health data is the biggest hindrance to effective health planning.
- There is generally low health seeking behavior among patients of public health clinics.

# Got Health? Need Help?

## What It Means

- Longer waiting time for patients and perception that public health care remains inefficient.
- Inability to track and monitor individual and family health history.
- Passive and detached local health workers.
- No effective health planning and intervention by Local Government Units (LGUs) and Local Chief Executives (LCEs).
- Local health programs remain as stop-gap, curative, and reactive measures rather than strategic, preventive, and proactive.

## Who We Are

- The first and by far the only Public Private Partnership (PPP) on Digital Health in the Philippines.
- The only Digital Health Platform in the Philippines developed by and for Local Governments.
- The biggest and strongest Digital Health Community in the Philippines with over 100 partner Local Governments and clinics as partners and almost 4,000 trained-clinicians as end-users.

## What We Offer

- Public-Private Partnership platform that has been proven to work for LGUs, enabling them to adopt a modern health information system through cost sharing and leveraging.
- Collaborative, bottoms-up, and transparent innovation process and training programs that involves local health clinicians and local chief executives.
- Open-Source, LGU and RHU-Friendly, Patient-Centered, and Health Service Provider-Oriented Health Information System.

**Wireless  
Access for  
Health**

## What We Do

- Uses wireless, digital, and mobile technologies to promote e-/m-Health solutions for LGUs.
- Develops industry-standard, low-cost health information process innovation and Digital Health technology that permit easier recording, reporting, access to, and consolidation and analysis of health and patient information.
- Capacitates LGUs, clinics, and hospitals all over the Philippines on digital health technology.

The dashboard displays a 'List of Submitted Reports and Status' table with columns for Health Facility, Month, Year, Program, Submitted, Approved, Status, Submitted By, and Action. It also shows a 'Health Facility Status Report' table with columns for Health Facility, Status, and Date.

# What We Can Do Together

- We can significantly improve patient health seeking behavior through WAH's Synchronized Patient Alerts by SMS (SPASMS).
- We can Accommodate more consultations and reduce waiting time by patients with WAH's electronic health record (EHR) and WAH for Hospitals (WAH4H) systems.
- We Help our partners analyze and utilize their own data for informed decision-making crafting of data-driven policies.

# What We Have Done

- WAH-EHR has recorded 1,451,296 patient records and 5,217,305 consultations in 140 clinics in 100 Municipalities, and 5 Cities located in 26 Provinces nationwide. 21 are Geographically Isolated and Disadvantaged Areas (GIDA).
- WAH-SPASMS sent 22,741 patient SMS reminders on maternal care, child care, family planning and basic statistics in 18 RHUs in 16 LGU-partners.
- WAH has helped improved data quality and reliability in all its partner clinics while also reducing by half the average waiting time of patients to complete a medical consultation.

# What Our Partners Say

"We look forward to the growth of WAH and its replication in other provinces. We are happy to serve as a successful model for other provinces and we wish to share our experience to inspire and call for more public-private partnerships between the government and private corporations."

Governor Victor A. Yap,  
Province of Tarlac

"We have seen how WAH has revolutionized the health care system in Tarlac and we, the League of Municipalities of Tarlac, will do our part to sustain this initiative and make the provision of proper and efficient health care through WAH a basic requirement for all the municipalities of Tarlac."

Mayor Dennis Norman T. Go,  
Municipality of Gerona,  
President of the  
League of Municipalities,  
Tarlac Chapter

"Baguio sees WAH as a functional and living capacity-building partnership for LGUs and public clinics. As a new partner, we look forward to a productive engagement as we adopt WAH in all our 16 districts."

Dr. Rowena P. Galpo,  
OIC, Health Services  
Office, City of Baguio

# Where We Are

## VISAYAS

## MINDANAO

Mayor Eldwin Alibutdan,  
Municipality of Ipi,  
Zamboanga Sibugay

"With WAH, we are now certain that our health personnel can properly and timely track and manage pregnancies. We hope to further reduce our MMR with the use of the WAH and at the same time do timely interventions to manage outbreaks of diseases."
